

But adding leverage to a single sector fund is a dumb idea. Investment grade midstream energy infrastructure companies generally operate at around 4.0X Debt:EBITDA. Non-investment grade are a little higher. The manager of a sector-specific leveraged fund is essentially rejecting this leverage as too conservative, even though such a fund has little diversification in a sharp fall in the market.

This is an expression of arrogance, that the managers of these funds have some insight superior to the collective opinion of CFOs and rating agencies. They don't. They are just willing to gamble other people's money that they do.

**AMERICAN ENERGY INDEPENDENCE**

## Arrogantly Leveraged

February 28 leverage of the Tortoise Energy Infrastructure Corporation  
Source: Tortoise

Tortoise Energy Infrastructure Corp. was introduced in 2004 as the first closed-end fund focusing primarily on master limited partnerships (MLPs).

What we own currently distribution

An investor pointed out to me leverage at some of these funds, from fact sheets recently published at the end of February. Goldman was running a fund with 35% leverage. Tortoise had one with 40%. YTD these funds were down 85% and 95% respectively as of 2pm today.

Given the collapse in March, these funds have all been forced sellers. As long-only investors we are down a lot. But the delevering of MLP CEFs has exacerbated the drop for everyone. Leveraged MLP closed end funds are a financial virus that is infecting the rest of the sector, by driving prices even lower. They harm all investors, but most especially the poor souls who sadly bought them. Fortunately, most of these funds are nearly dead, with little capital remaining to protect.
