SL Advisors SMA Strategies

Overview

SL Advisors offers separately managed accounts for individuals, family offices and institutions for long only and long/short equity investment strategies. Client assets are held with Charles Schwab, the largest provider of custody services for independent registered investment advisors in the U.S. Client portfolios are completely transparent via Schwab which provides real-time access to accounts and all supporting information.

Investment Strategies

MLP & Energy Infrastructure SMA:

SL Advisors SMA strategy is focused on North American energy infrastructure. Investors receive K-1s as direct MLP investments comprise roughly half the portfolio.

- Aims to outperform the Alerian MLP Index with similar volatility and low turnover
- Unleveraged, long only portfolio of Master Limited Partnerships (MLPs) and corporations focused on the Midstream sector (Pipelines)
- Tax Efficiency: The strategy seeks tax efficiency through a low turnover strategy of direct holdings.
- Avoids MLPs with burdensome Incentive Distribution Rights (IDRs)
- Appropriate for high net worth investors desiring exposure to North American Energy Infrastructure and comfortable receiving K-1s for individual investments.

Low Vol Long Only SMA:

Low Vol Long Only SMA:

This strategy utilizes stocks of stable companies with high dividend yields to generate income with capital appreciation by investing in a diverse and unleveraged portfolio of U.S. equities.

- Companies are selected that possess a history of steady earnings growth, attractive dividend yields and are less volatile than the overall market.
- Academic research has shown the Capital Asset Pricing Model (CAPM) fails to explain risk-adjusted returns and that lower volatility stocks have outperformed over long periods of time.

Strategy Disclosures

MLP & Energy Infrastructure SMA:

Inception date: 4.30.2009. Returns do not include cash balances prior to May 2010. SL Advisors was founded in April 2009. The Index is the Alerian MLP Index, AMZX. Past performance is not indicative of future return

Disclosure: Returns for the MLP & Energy Infrastructure Strategy reflect the performance of the composite of all discretionary accounts invested in this strategy. The returns shown reflect the deduction of an annual advisory fee, as well as other charges incurred by the accounts, including brokerage and custodian fees. The returns shown also include reinvestment of dividends and other earnings. The performance of the Alerian MLP index is shown for comparison purposes only. The Alerian MLP is a float-adjusted, capitalization-weighted index, which tracks 50 large- and mid-cap energy Master Limited Partnerships (MLPs), capturing 75% of available market capitalization. This index tracks securities which most closely correlate to the securities in which the MLP strategy invests. You cannot invest directly in an index. Past performance is no guarantee of future results. Master Limited Partnerships (MLPs) are publicly traded interests in energy infrastructure and related assets. They represent direct proportional ownership stakes in the underlying assets rather than securities in a corporation. MLPs may be appropriate for high net worth investors comfortable with receiving a K-1 for each investment rather than a 1099. SL Advisors does not provide tax advice. This strategy is subject to risk of loss through generally lower equity markets or lower prices on equity securities owned. Most listed companies must have a majority of independent directors on their boards, but the General Partner ("GP") to a MLP does not need to meet the same standards as other listed companies which have a more stringent fiduciary standard. Lack of independence and lower standards of care are factors that could influence the decisions made by the GP's directors, possibly to the detriment of the limited partners of the MLP.

Low Vol Long Only SMA:

The Index is the S&P 500 Low Volatility High Dividend Index including dividends. Past performance is not indicative of future returns

Disclosure: The objective of this strategy is to: (1) generate equity market returns over full market cycle with lower volatility (2) outperform S&P500 during periods of significant stock market underperformance (3) generate higher dividend income than the S&P500. Returns for the Low Vol Long Only Strategy reflect the performance of a composite comprised of all discretionary accounts invested in this strategy. The returns shown reflect the deduction of an annual advisory fee, as well as other charges incurred by the accounts, including brokerage and custodian fees. The returns shown also include reinvestment of dividends and other earnings. The performance of the S&P 500 Low Volatility High Dividend index is shown for comparison purposes only. The S&P 500 Low Volatility High Dividend index measures performance of the 50 least-volatile high dividend-yielding stocks in the S&P 500. This index tracks securities which most closely correlate to the securities in which the Low Vol Long Only strategy invests. Past performance is no guarantee of future results. You cannot invest directly in an index. This strategy is subject to risk of loss through generally lower equity markets or lower prices on equity securities owned.

Indexes and benchmarks may not directly correlate or only partially relate to portfolios managed by SL Advisors as they have different underlying investments and may use different strategies or have different objectives than portfolios managed by SL Advisors (e.g. The Alerian index is a group MLP securities in the oil and gas industries). Portfolios may not include the same investments that are included in the Alerian Index. The S & P Index and HFR Index do not directly relate to investment strategies managed by SL Advisors.
